Good Morning:

Yes, our waste at NFB is shipped to US Ecology-Wayne Disposal Inc. in Michigan. I am not familiar with a Stennet Evaluation. Is this to evaluate if the landfill was made into residential? Why would that be our concern? At this time it is an approved disposal facility for Rad. If they were to close and try to change the nature of the property, they would have to go through the proper assessment processes, no? That would be on them, no?

Subject: NFB rad waste

Hi Eric,

I hope all is well with you. I'm working on the Maywood site and we're considering shipping rad waste to WDI. I understand you shipped NFB waste there. I was wondering if a Stennet evaluation and risk assessment was performed for the NFB waste disposed at WDI. USACE performed these evaluations for Maywood and it's indicating that a future "post-closure" resident living on top of the closed landfill would experience an unacceptable risk (duh!). I'm not sure if this pathway is reasonable and should be considered. Otherwise, all other pathways are well below a level of concern. Any thoughts would be appreciated.

Regards,
